

# ABSTRACT

An organ anastomosing apparatus is provided with a flexible guide wire 4 suitable to be inserted into an organ, a first magnet 2  
5 in a disc shape provided with a lateral through hole 2b so as to slidably insert the guide wire 4, a tube 3 pushing the first magnet 2 into a lateral hole along the guide wire, a vinculum 5 secured to a center portion of one end surface of the first magnet 2 in an axial direction thereof, and a second magnet 6 provided with a through  
10 hole in which the vinculum is inserted.
